TITLE : AUTOMATIC CHEMICAL ANALYSIS
DEVICE

ABSTRACT : PURPOSE: To check a cross contamination in an automatic chemical analysis device automatically.

CONSTITUTION: A processing part 32 automatically issues a work sheet for searching for a combination of items which induce cross contamination of a reaction container according to the number of specified items and a work sheet for searching for a combination of items which induce cross contamination of a reagent-pouring mechanism. A data operation part 34 performs measurement according to the issued work sheets and then compares measurement results for each item with a reference value, thus enabling presence or absence of cross contamination to be judged. A file part 36 retains the judgment result as a cross contamination data at the time of normal measurement.
